

Stop the press!

The Boeing Company has announced to airlines that AkzoNobel Aerospace Coatings' Aerodur 3001 Basecoat and Aerodur 3002 Clearcoat system is now offerable as a no cost option on new Boeing Airplanes.

ron.fattal@akzonobel.com

The system is listed in Boeing's D6-1816 manual (all Boeing customers have this manual). The document addendum PDD6-135 references Aerodur 3001 and Aerodur 3002 by name and is the only Basecoat/Clearcoat (BC/CC) system in the specification.

An updated addendum will be released in December 2010, listing the full family of Aerodur 3001/3002 Activators. This departure document will be PDD6-143.

The Aerodur BC/CC system brings many advantages to our airline customers, including significantly improved durability, cleanability and longer scheme life, which in turn build better brand image over time. This also leads to lower costs as aircraft paint programs can be extended over time.

Customers requiring the system from Boeing will receive an NTO (No Technical Objection) upon submission of their request. AkzoNobel can provide Boeing customer service contact information upon request.
